Subject Index of Volume 199

-
- Aerospace components
 - ductility degradation of vacuum-plasma-sprayed NARloy-Z at elevated temperatures 145
 - Aging
 - embrittlement and aging at 475 °C in an experimental ferritic stainless steel containing 38 wt.% chromium 153
 - Alloys
 - laminate of 60 vol.% BeO/Be composite with 6061 Al alloy L1
 - Al–SiC
 - structure and properties of Al–SiC foam 195
 - Alumina coatings
 - residual stress measurement in alumina coatings L15
 - Aluminium
 - laminate of 60 vol.% BeO/Be composite with 6061 Al alloy L1
 - TALAT 96 a training programme for aluminium application technologies in Europe 73
 - Aluminium–Lithium alloy
 - influence of surface condition on the fatigue of an aluminum–lithium alloy (2090-T3) L3
 - Amorphous film
 - investigation of the formation of an amorphous film at the ZrO_2 – Y_2O_3 /NiCoCrAlY interface of thermal barrier coatings produced by plasma spraying 229
 - Application techniques
 - TALAT 96 a training programme for aluminium application technologies in Europe 73
 - Authoring
 - the use of computer simulations in training 109
 - Axial fatigue life
 - influence of surface condition on the fatigue of an aluminum–lithium alloy (2090-T3) L3
 - Balance in education
 - education through materials science 69
 - Ball milling
 - ball milling of ductile metals 165
 - Biomaterials
 - biomaterials education: a challenge for medicine and industry in the late 1990s 53
 - proposed European advanced level course on biomaterials leading to the degree of Master of Science in Biomaterials 61
 - Carbide
 - hardness and corrosion resistance of single-phase nitride and carbide on iron 205
 - China
 - a perspective of materials science and engineering education in China 9
 - Communication architecture
 - the use of computer simulations in training 109
 - Composites
 - laminate of 60 vol.% BeO/Be composite with 6061 Al alloy L1
 - Compression
 - structure and properties of Al–SiC foam 195
 - Computer assisted instruction
 - the use of computer simulations in training 109
 - Cooperative research
 - materials research activities in Korea 23
 - Copper
 - ball milling of ductile metals 165
 - Corrosion
 - evaluation of the corrosion and mechanical properties of a range of experimental Cr–Mn stainless steels 183
 - Corrosion resistance
 - hardness and corrosion resistance of single-phase nitride and carbide on iron 205
 - Courseware design
 - DISCourse: tools for the design of learning material 99
 - Crack-tip stresses
 - molecular dynamics embedded atom method simulations of crack-tip transformation toughening in Fe–Ni austenite 173
 - Cr–Mn stainless steels
 - evaluation of the corrosion and mechanical properties of a range of experimental Cr–Mn stainless steels 183
 - Crystallizable cordierite glass
 - effect of crystallizable cordierite glass on devitrification of Pyrex borosilicate glass L11
 - Curricula program
 - materials education at the pre-college level 1
 - Curriculum
 - a perspective of materials science and engineering education in China 9
 - Czech Republic
 - education programmes in materials science and engineering 79
 - Degree course
 - materials science education: from school to university 89
 - Devitrification
 - effect of crystallizable cordierite glass on devitrification of Pyrex borosilicate glass L11
 - Dislocations
 - comments on the paper “Effects on hydrogen on thermally activated dislocation motion in iron” by H. Dong and A.W. Thompson 239
 - reply to Comments by H. Kimura on “Effects of hydrogen on thermally activated dislocation motion in iron” 243
 - Domain representation
 - DISCourse: tools for the design of learning material 99
 - Double shear creep testing
 - double shear creep testing of superalloy single crystals at temperatures above 1000 °C 121
 - Ductility
 - ball milling of ductile metals 165
 - ductility degradation of vacuum-plasma-sprayed NARloy-Z at elevated temperatures 145

Ecology

education through materials science 69

Education

biomaterials education: a challenge for medicine and industry in the late 1990s 53

materials science and engineering education in Poland 27

materials science education: from school to university 89

proposed European advanced level course on biomaterials leading to the degree of Master of Science in Biomaterials 61

telematics for education and training: an overview of the DELTA programme 95

Educational system

a perspective of materials science and engineering education in China 9

Electron devices

microelectronics education in Belgium 39

Electronic materials

microelectronics education in Belgium 39

Electronics education

for a new educational strategy for ULSI microelectronics 45

Embrittlement

embrittlement and aging at 475 °C in an experimental ferritic stainless steel containing 38 wt.% chromium 153

Eurochip

Eurochip: a microelectronics education initiative 35

Europe

science across Europe: a functioning example 87

European Commission

telematics for education and training: an overview of the DELTA programme 95

Fatigue

influence of hydrogen-induced ordering on the tensile and fatigue characteristics of the alloy system $\text{Pd}_{1-x}\text{Mn}_x$ ($x = 0.1-0.25$) 131

Fe-Ni austenite

molecular dynamics embedded atom method simulations of crack-tip transformation toughening in Fe-Ni austenite 173

Ferritic stainless steel

embrittlement and aging at 475 °C in an experimental ferritic stainless steel containing 38 wt.% chromium 153

Foam

structure and properties of Al-SiC foam 195

Fourth Framework Programme

telematics for education and training: an overview of the DELTA programme 95

Fundamental points

the Siena group experience 65

Graduate courses

education programmes in materials science and engineering 79

Hardness

hardness and corrosion resistance of single-phase nitride and carbide on iron 205

High temperature X-ray diffraction

effect of environmentally promoted surface stabilization of α_2 in Ti_3Al -aluminides during high temperature evaluation L7

Hot isostatic pressing

influence of the powder particle size on tensile properties of Ni_3Al processed by rapid solidification and hot isostatic pressing 211

Hydride phase

influence of hydrogen-induced ordering on the tensile and fatigue characteristics of the alloy system $\text{Pd}_{1-x}\text{Mn}_x$ ($x = 0.1-0.25$) 131

Hydrogen

comments on the paper "Effects on hydrogen on thermally activated dislocation motion in iron" by H. Dong and A.W. Thompson 239

reply to Comments by H. Kimura on "Effects of hydrogen on thermally activated dislocation motion in iron" 243

Indentation

structure and properties of Al-SiC foam 195

Industry

biomaterials education: a challenge for medicine and industry in the late 1990s 53

Information exchange

science across Europe: a functioning example 87

Instruction design

DISCourse: tools for the design of learning material 99

Integrated circuits

for a new educational strategy for ULSI microelectronics 45

Integrated circuits and systems

Eurochip: a microelectronics education initiative 35

Intelligent tutoring systems

the use of computer simulations in training 109

Ion beam synthesis

hardness and corrosion resistance of single-phase nitride and carbide on iron 205

Ion implantation

orientation relations of nitrides in iron made by ion implantation 219

Iron

comments on the paper "Effects on hydrogen on thermally activated dislocation motion in iron" by H. Dong and A.W. Thompson 239

orientation relations of nitrides in iron made by ion implantation 219

reply to Comments by H. Kimura on "Effects of hydrogen on thermally activated dislocation motion in iron" 243

Korea

materials research activities in Korea 23

Laminates

laminate of 60 vol.% BeO/Be composite with 6061 Al alloy L1

Learner modelling

DISCourse: tools for the design of learning material 99

Learner tools

the use of computer simulations in training 109

Master of Science

proposed European advanced level course on biomaterials leading to the degree of Master of Science in Biomaterials 61

Material engineering

materials science and engineering education in Poland 27

Materials

materials science education: from school to university 89

Materials cycle

education through materials science 69

Materials engineering for electronics

education programmes in materials science and engineering 79

Materials research

materials research activities in Korea 23

Materials science and cross-fertilisation

education through materials science 69

Materials World Module program

materials education at the pre-college level 1

Mechanical properties

evaluation of the corrosion and mechanical properties of a range of experimental Cr-Mn stainless steels 183

- MEng
 - materials science education: from school to university 89
- Microelectronics
 - for a new educational strategy for ULSI microelectronics 45
 - microelectronics education in Belgium 39
- Microelectronics education
 - Eurochip: a microelectronics education initiative 35
- Microhardness
 - influence of hydrogen-induced ordering on the tensile and fatigue characteristics of the alloy system $\text{Pd}_{1-x}\text{Mn}_x$ ($x = 0.1-0.25$) 131
- Microstructure
 - double shear creep testing of superalloy single crystals at temperatures above 1000 °C 121
 - structure and properties of Al-SiC foam 195
- Modelling
 - the use of computer simulations in training 109
- Molecular dynamics
 - molecular dynamics embedded atom method simulations of crack-tip transformation toughening in Fe-Ni austenite 173
- Monitoring
 - the use of computer simulations in training 109
- Multimedia
 - the use of computer simulations in training 109
- NARloy-Z
 - ductility degradation of vacuum-plasma-sprayed NARloy-Z at elevated temperatures 145
- National Curriculum
 - materials science education: from school to university 89
- Ni_3Al
 - influence of the powder particle size on tensile properties of Ni_3Al processed by rapid solidification and hot isostatic pressing 211
- Nickel
 - X-ray determination of strain differences between the sides of a twin boundary in polycrystalline nickel 139
- Nitride
 - hardness and corrosion resistance of single-phase nitride and carbide on iron 205
- Nitrides
 - orientation relations of nitrides in iron made by ion implantation 219
- Opto-electronics
 - microelectronics education in Belgium 39
- Orientation relations
 - orientation relations of nitrides in iron made by ion implantation 219
- Palladium-manganese alloys
 - influence of hydrogen-induced ordering on the tensile and fatigue characteristics of the alloy system $\text{Pd}_{1-x}\text{Mn}_x$ ($x = 0.1-0.25$) 131
- Particle size
 - influence of the powder particle size on tensile properties of Ni_3Al processed by rapid solidification and hot isostatic pressing 211
- Phase stability
 - effect of environmentally promoted surface stabilization of α_2 in Ti_3Al -aluminides during high temperature evaluation L7
- Plasma spray
 - investigation of the formation of an amorphous film at the $\text{ZrO}_2\text{-Y}_2\text{O}_3/\text{NiCoCrAlY}$ interface of thermal barrier coatings produced by plasma spraying 229
- Practical and theoretical lectures
 - the Siena group experience 65
- Pre-college
 - materials education at the pre-college level 1
- Pyrex borosilicate glass
 - effect of crystallizable cordierite glass on devitrification of Pyrex borosilicate glass L11
- Rapid solidification
 - influence of the powder particle size on tensile properties of Ni_3Al processed by rapid solidification and hot isostatic pressing 211
- Research telematics
 - telematics for education and training: an overview of the DELTA programme 95
- Residual stress
 - residual stress measurement in alumina coatings L15
- School
 - materials science education: from school to university 89
 - the Siena group experience 65
 - science across Europe: a functioning example 87
- Silicon
 - for a new educational strategy for ULSI microelectronics 45
 - materials science education in Japan 15
- Silicon technology
 - education through materials science 69
- Simulation
 - the use of computer simulations in training 109
- Software control
 - the use of computer simulations in training 109
- Superconductors
 - materials science education in Japan 15
- Strain
 - X-ray determination of strain differences between the sides of a twin boundary in polycrystalline nickel 139
- Superalloy single crystals
 - double shear creep testing of superalloy single crystals at temperatures above 1000 °C 121
- Tailor-made materials
 - materials science education in Japan 15
- TALAT Project
 - TALAT 96 a training programme for aluminium application technologies in Europe 73
- Telematics program
 - telematics for education and training: an overview of the DELTA programme 95
- Tensile tests
 - influence of hydrogen-induced ordering on the tensile and fatigue characteristics of the alloy system $\text{Pd}_{1-x}\text{Mn}_x$ ($x = 0.1-0.25$) 131
- Thermal barrier coatings
 - investigation of the formation of an amorphous film at the $\text{ZrO}_2\text{-Y}_2\text{O}_3/\text{NiCoCrAlY}$ interface of thermal barrier coatings produced by plasma spraying 229
- Thermal expansion
 - effect of crystallizable cordierite glass on devitrification of Pyrex borosilicate glass L11
- Thermally activated motion
 - comments on the paper "Effects on hydrogen on thermally activated dislocation motion in iron" by H. Dong and A.W. Thompson 239
 - reply to Comments by H. Kimura on "Effects of hydrogen on thermally activated dislocation motion in iron" 243
- Titanium aluminide alloys
 - effect of environmentally promoted surface stabilization of α_2 in Ti_3Al -aluminides during high temperature evaluation L7

Training

proposed European advanced level course on biomaterials leading to the degree of Master of Science in Biomaterials 61

Training program

TALAT 96 a training programme for aluminium application technologies in Europe 73

Twin boundary

X-ray determination of strain differences between the sides of a twin boundary in polycrystalline nickel 139

Undergraduate courses

education programmes in materials science and engineering 79

University

biomaterials education: a challenge for medicine and industry in the late 1990s 53

materials science education: from school to university 89

Vacuum plasma spraying

ductility degradation of vacuum-plasma-sprayed NARloy-Z at elevated temperatures 145

ZrO₂-Y₂O

investigation of the formation of an amorphous film at the ZrO₂-Y₂O₃/NiCoCrAlY interface of thermal barrier coatings produced by plasma spraying 229
